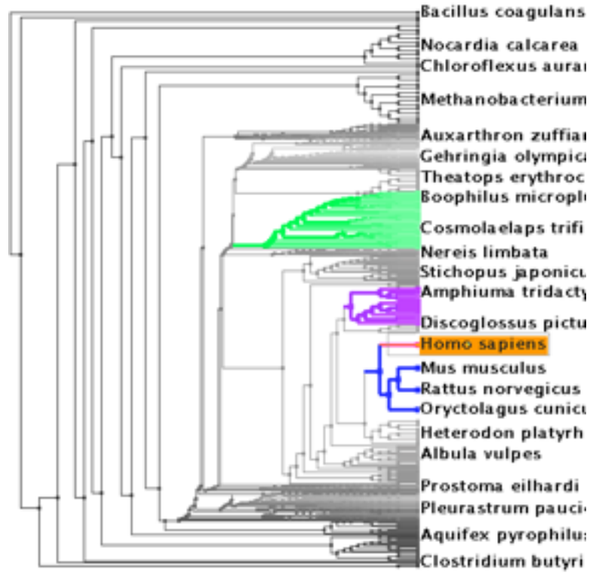
Why analyze?

- imposes a structure on huge design space
  - –scaffold to help you think systematically about choices
  - –analyzing existing as stepping stone to designing new

SpaceTree

[SpaceTree: Supporting Exploration in Large Node Link Tree, Design Evolution and Empirical Evaluation. Grosjean, Plaisant, and Bederson. Proc. InfoVis 2002, p 57–64.]

TreeJuxtaposer



[TreeJuxtaposer: Scalable Tree Comparison Using Focus +Context With Guaranteed Visibility. ACM Trans. on Graphics (Proc. SIGGRAPH) 22:453– 462, 2003.]

What?

- Tree

Why?

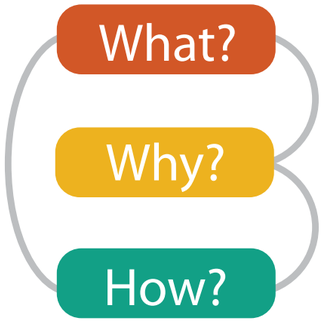
- Actions
  - Present → Locate → Identify

- Targets
  - Path between two nodes

How?

- SpaceTree
  - Encode → Navigate → Select → Filter → Aggregate

- TreeJuxtaposer
  - Encode → Navigate → Select → Arrange



Analysis framework: Four levels, three questions

- *domain* situation
  - –who are the target users?
- *abstraction*
  - –translate from specifics of domain to vocabulary of vis
- **what** is shown? **data abstraction**
  - often don't just draw what you're given: transform to new form
- **why** is the user looking at it? **task abstraction**
- *idiom*
- **how** is it shown?
  - **visual encoding idiom**: how to draw
  - **interaction idiom**: how to manipulate
- *algorithm*
  - –efficient computation

Why is validation difficult?

- different ways to get it wrong at each level

Actions: Analyze, Query

- analyze
  - consume
    - discover vs present
      - aka explore vs explain
    - enjoy
      - aka casual, social
  - produce
    - annotate, record, derive
  - query
    - how much data matters?
      - one, some, all
  - independent choices

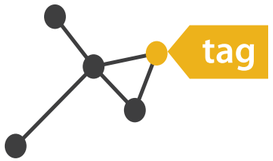
→ *Discover*

→ *Present*

→ *Enjoy*

→ Produce

→ *Annotate*



→ *Record*

→ *Derive*

Derive: Crucial Design Choice

- don't just draw what you're given!
  - decide what the right thing to show is
  - create it with a series of transformations from the original dataset
  - draw that
- one of the four major strategies for handling complexity
